

Landing area pole jump

We offer three standard sizes of the landing area but we are able to produce the shape and the size of it at customer's request of course. The landing area consists of four blocks, which are fastened to each other (both inside and outside) with Velcro. On the outside sides the zipper works as safeguards against possible displacement of the blocks from each other (see photo). On the surface of each of these blocks is another zipper for connection with a blanket which is not only design issue, but it also helps to spread of the landing over a larger area. The blanket also

prevents the athlete from landing between joining of the blocks. Monoblocks are covered with a Belgian canvas and the core is made from high quality foam. At the bottom of landing area is the ethylene grade. Thanks to it the landing area is not placed directly on the ground. The ethylene grade is included in the price of the landing area. The blanket is covered with Belgian canvas too, but on top of it we use the mesh. Thanks to this material-protection the blanket can't be damaged by track shoes. The blanket is 10 cm high. The core is made of foam. We also provide cover sheet, which is not included in the price of landing area. We can deliver the whole cover (see photo).

Product number	Size	Weight	Color
