# Landing area for high jump

We offer four standard sizes, but we can comply with customer´s request and produce the size as he wish. The landing area consists of several blocks, which are fastened to each other (inside and outside) by Velcro. Outside zippers work as the safeguards against possible displacement of the blocks from each other. (See photo). On the surface of each of these blocks is another zipper for connection with a blanket which is not only design issue but it also helps to spread of the landing over a larger area . The blanket also prevents the athlete from landing between joining of the blocks. Monoblocks are covered with a Belgian canvas and the core is made from high quality foam. The blanket is covered with Belgian canvas too, but on top of it we use the mesh. In case of indoor landing area the canvas is sufficient . The blanket is 10 cm high. The core is made of the foam. We also provide cover sheet, which is not included in the price of the landing area.
