Stretch mats

Stretch mats feature a flexible, comfortable surface that adapts to the athlete's movements under load and then returns to its original shape. The core consists of highly elastic polyurethane foam with a higher density.

The cover is phthalate-free. The underside has an anti-slip finish that helps reduce movement of the mat on the floor. Carrying handles make the mat easier to carry and handle.

A stretch surface is also used on professional landing mats that simulate a landing pit. We recommend using the mats barefoot or wearing gymnastics shoes.
